

QUALITY POLICY

JT Fabrications (Leics) Limited are based in Leicestershire, ideally located to serve clients throughout the Midlands and the rest of the UK. Established in 1995 we quickly gained a reputation as a company who provide both excellent service and quality products in mild steel, stainless steel and aluminium. We are committed to meeting our client's project-specific requirements whilst completing projects both on time and within budget.

Our ability to liaise/coordinate with relevant interested parties e.g. clients/contractors/designers, from concept through project management, design, providing structural engineers calculations along with full TEKLA Structures drawing packages in both the traditional 2D format as well as 3D modelling software enables us to turn your ideas into production realities.

This quality policy is appropriate to the purpose and context of JT Fabrications and supports its strategic direction. It is communicated, understood and applied by all staff and provides the framework for setting and monitoring of business/quality objectives. This policy is communicated to all relevant interested parties in our built environment project supply chains, to ensure alignment at all levels of projects that JT Fabrications are involved in or plans to be involved in. This policy is also available to all other interested parties by request.

To demonstrate, to both customers and staff, the company's commitment to quality it is the policy of JT Fabrications to achieve and maintain recognition with an independent certification/notified body as a company of assessed quality capability under the requirements of BS99001, ISO9001 and BS EN 1090 using a risk-based and proportionate approach. The requirements of this system, without any exclusions are mandatory for all company personnel and no unauthorised alterations or deviations are permitted.

The company have considered its external and internal issues, the requirements of relevant interested parties and our products and services to determine our scope of approval, as follows;

Scope: The design, manufacture, supply and installation of bespoke structural, architectural steelwork and steel fabrications for construction and built environment projects, including project quality management, inspection, testing and associated site activities under the organisation's control, in accordance with the requirements of ISO9001, BS99001 and BS EN 1090 with a load-bearing up to Execution Class 2.

JT Fabrications is committed to review, determine and implement changes to the quality management system in order to satisfy applicable requirements and ensure that its effectiveness is continually improved.

The only way to achieve and maintain this policy is for every employee, in whatever capacity, to perform his or her work to the highest standards at all times.

Our aim: **"we are committed to achieving the highest standards of project management, product and service by exceeding the expectations of all interested parties including our customers, employees and suppliers".**
